Commit to Making a Change

According to the Transtheoretical Model, there are five major stages of change. At the pre-contemplation stage, people may not even be aware that a problem (e.g., high debt load and risk for diabetes) exists or that a change should be made in their lives. At the contemplation stage, they gain knowledge about alternative behaviors and begin to understand ways to change (e.g., reduce spending and increase physical activity). At the preparation stage, people seriously plan to make changes and gain required skills (e.g., taking a personal finance course or visiting the www.nutrition.gov website). At the action stage, they “take the plunge” and actually change a behavior. In the maintenance stage, people work to sustain their change and reap the rewards of their efforts (e.g., decreased debt balance and improved blood-glucose levels).

Commitment takes place during the preparation of stage of change. Here people acknowledge that “if it is to be, it’s up to me” and begin to develop a plan of action. Studies have found that “plans to change” can predict actual changes. An example of a statement of commitment to change is “I will save $25 per week in a 401(k).” Another is “I will take two 600-mg calcium tablets with meals daily.”

As people prepare to change their behaviors, they often seek “how to” information and advice. Common activities performed during the preparation stages of change are: enrolling in a class, consulting a counselor, buying a self-help book, and paying increased attention to a behavior-change issue (e.g., preventing diabetes).

As you commit to take action to improve your health and finances, determine what behavior(s) you are changing, the pros and cons of making changes, and how you intend to change your behavior and address obstacles along the way. To firm up your plans, complete the attached Worksheet, Commitment to Change, for both health and wealth-related goals.

Unless commitment is made, there are only promises and hopes...but no plans.
—Peter Drucker

pounds) and dared not cross it. Or maybe they became aware of the dangers of an unhealthy practice and told themselves “Something has to change” or “I’ve got to do something about this” or “I’m just not going to do this anymore.” More commonly, however, successful behavior change requires a variety of self-help strategies and/or a strong support system.

Strategic Tip 4
Focus: Commit to Making a Change

The Celebratory Split Squat Jumps: Win over a new client? Figure out how to un-jam the printer? Is it finally Friday?! Celebrate with the split squat jump. With feet hip-width apart, step the left leg back two feet and balance on the ball of the foot. Next, lower into a lunge, and then accelerate upwards in an explosion of celebration. While in the air, switch feet so that the left foot is planted firmly in front and the right leg is now behind. Repeat 10-12 times on each side.

Unless commitment is made, there are only promises and hopes...but no plans.
—Peter Drucker

STRATEGY 4

Health and Wealth
Action Steps This Week

Health
Identify the stage of change you are in with respect to a health behavior that you want to change. Write a statement of commitment to change a health behavior using the words “I will.” Identify the primary factors that motivate you to make health changes (e.g., fitting into tight jeans). Turn a negative behavior into a positive (e.g., I’ll cut back on sweets and eat fresh fruit instead).

Wealth
Identify the stage of change you are in with respect to a financial behavior that you want to change. Write a statement of commitment to change a financial behavior using the words “I will.” Identify the primary factors that motivate you to make financial changes (e.g., fear of living in poverty). Turn a negative behavior into a positive (e.g., I’ll cut back on lottery tickets and save the money).

What behavior changes are you planning to make? Health? Wealth?
